Professional Summary

Software Engineering undergraduate with hands-on experience in building backend services, REST APIs, and full-stack applications using Python, FastAPI, and PostgreSQL. Strong foundation in Data Structures & Algorithms and developing AI-powered solutions for real-world use cases.

Education

School of Data Science and Forecasting, DAVV, Indore 2022 – 2027
Integrated B.Tech + M.Tech in Artificial Intelligence & Data Science GPA: 8.2/10
SICA SS School No.2, Indore 2010 – 2022
Higher Secondary Education (XII): 80.6%

Experience

AI/ML Intern, RAG Genesis Global Pvt. Ltd. Mar 2026 – Sept 2026

- Built backend services for an AI-based grading system using FastAPI and REST APIs for grading and related application workflows.
- Improved latency in Genesis AI's voice workflow, contributing to a more responsive application experience.
- Developed ATS resume parsing functionality to extract and organize candidate information for automated resume screening.

Projects

WebRAG - Chat with Any Webpage github

- Developed WebRAG, an AI-powered RAG system that answers questions from webpages using FastAPI, Python, PostgreSQL, and Groq LLM for conversational, context-aware search.
- Implemented hybrid retrieval combining FAISS vector search, Hugging Face embeddings, BM25 keyword matching, and Reciprocal Rank Fusion to enhance relevance and ranking accuracy for web content extraction.
- Built automated document ingestion pipeline with intelligent chunking, semantic embeddings, and pytest validation.

Multi-Agent Research Pipeline github

- This project is a multi-agent AI research system that automates end-to-end research using specialized agents for search, reading, writing, and review.
- Built with Python, LangChain, Groq API, Tavily API, Streamlit, it turns a user query into a structured research report with minimal manual effort.

Market Basket Analysis github

- Market Basket Analysis using Apriori is a Python project that mines retail transaction data to discover frequent itemsets and association rules for better customer insights.
- Using Python for analysis and HTML for UI, it helps identify buying patterns that can boost cross-selling, recommendations, and sales.

Technical Skills

Languages: Python, SQL
Backend: FastAPI, REST APIs, CRUD, JSON, API Validation
Databases & Tools: PostgreSQL, MySQL, MongoDB, Vector Databases, SQLite, Docker, Git, GitHub
Core CS: Data Structures & Algorithms, OOP, DBMS, System Design
AI & ML: Machine Learning, Deep Learning, NLP, RAG, scikit-learn, Pandas, NumPy, Matplotlib

Certifications

TCS CodeVita Season 13: Achieved Global Rank **887** among 140K+ participants.
TCS iON NQT 2026: Scored **94.44%** in Python Programming and **86.09%** in Advanced Quantitative Reasoning.
Smart India Hackathon (SIH): Qualified the internal round among **200+ competing teams**.
Certifications: HackerRank SQL (Basics), CodeX: Crack the Code, GDG On-Campus Solution Challenge.
